AYANDE WUESE JOY

Full-Stack Web Developer · AI Engineering Learner

08137133232 | joywuese74@gmail.com | linkedin.com/in/wuese-ayande | github.com/joywuese74-web

PROFESSIONAL SUMMARY

Physics graduate turned full-stack developer who brings a scientist's rigour to code. I build and ship working tools in Go and Python, from command-line utilities to browser-based apps powered by HTTP servers, and I contribute to team projects at Talent Nation, reviewing pull requests and shaping product requirements. Alongside my developer training I am studying AI engineering from the ground up, starting with the mathematics behind machine learning, and practising data structures and algorithms daily. I mentor a beginner programmer in Python, which keeps my own fundamentals sharp. Detail-oriented, self-directed, and at home in remote, collaborative work.

PROFESSIONAL EXPERIENCE

Web Development Trainee *February 2026 – Present*

Learn2Earn / Talent Nation

- Built web tools in Go, including an HTTP server that turns a command-line ASCII-art generator into a browser-based application.
- Build with Python, HTML and CSS to create responsive, functional interfaces across multiple hands-on projects.
- Contribute to the Talent Nation Project Hub, a team web app: review teammates' pull requests on GitHub and help refine its product requirements document (PRD).
- Owned validation, notes, workflow and storage features as Engineer A on CampusFlow Next, a Python helpdesk upgraded in a two-engineer sprint.
- Mentor a beginner programmer in Python with weekly learning plans and progress tracking.

PROJECTS

Talent Nation Project Hub *Team project*

Collaborative web app for the Talent Nation programme. I work across the codebase, review pull requests, and help correct and finalise the PRD presented to our mentor.

Repository: github.com/joywuese74-web/Talent-Nation-Project-Hub

CampusFlow / CampusFlow Next *Python*

Command-line helpdesk for handling campus requests, built and then upgraded across two team sprints. On the upgrade I own input validation, notes, workflow states and data storage.

Repository: github.com/okonkwo348/campusflow

Study Tracker *Google Apps Script, Google Sheets*

Self-built web app with a weekly timetable and a daily tracker for logging study blocks and time. Deployed live and shared as a copyable template so others can personalise it.

Repository: github.com/joywuese74-web

L'aura (Terra Studio) – Beauty & Wellness Booking *HTML, CSS*

Online beauty and wellness service booking site presenting the brand's products and services through a clean, design-led layout; deployed on GitHub Pages.

Repository: github.com/joywuese74-web/The-L-aura

ASCII Art – Web *Go, HTML*

Web application extending the ASCII Art tool with an HTTP server and browser interface, so users generate ASCII art directly in the browser.

ASCII Art *Go*

Command-line application that converts plain text into stylised, banner-style ASCII art.

Repository: github.com/joywuese74-web

CURRENT STUDY

AI Engineering – AI Engineering from Scratch (self-directed) *October 2026 – Present*

Phase 01: Mathematics Foundations for machine learning; 4 hours of structured study daily, with mentor check-ins

Data Structures & Algorithms *October 2026 – Present*

Daily practice alongside AI engineering study

TECHNICAL SKILLS

Languages:	Go (Golang), Python, HTML5, CSS3, Google Apps Script
Areas of Practice:	Web Development, HTTP Servers, REST Principles, CLI Tools, Math for Machine Learning
Collaboration:	Code Review (GitHub Pull Requests), Team Sprints, Product Requirements (PRDs), Mentoring
Tools:	Git, GitHub, GitHub Pages, Google Sheets, AI-Assisted Development

EDUCATION

Bachelor of Science (B.Sc.), Pure and Applied Physics *2021*

Federal University Wukari, Taraba State — Second Class Honours (Upper Division)

Secondary School Leaving Certificate (WAEC) *2017*

Divine Love Catholic Girls' Secondary School, Katsina-Ala, Benue State
